

Escape to victory 1

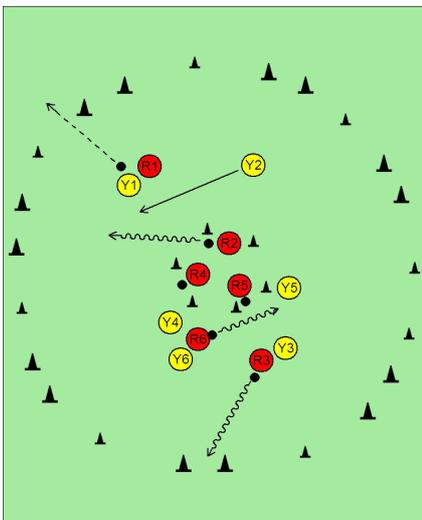

How it works

The red players have a ball each and all stand in a coned safe zone in the centre of the circle.

The yellow players are partnered with a red player and stand inside the outer circle playing area.

Red players have to try and escape the playing area by dribbling their ball through one of the larger cone gates around the edge of the circle.

The yellow players have to try and prevent this from happening.

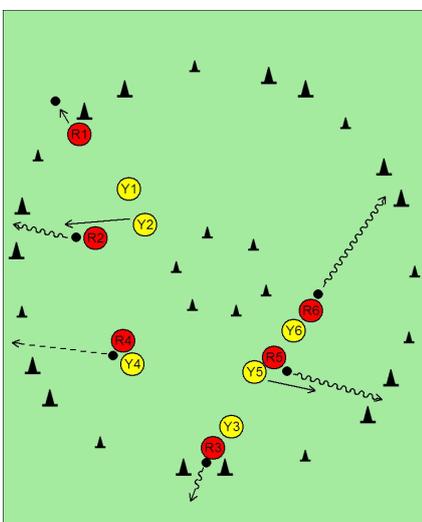

In this diagram Red Player 1 has made a break for a cone gate but has had the ball kicked out of play by their yellow partner.

Red Player 2 has made a break in a different direction out of the safe zone and the yellow partner is trying to catch up to make a challenge.

Red Players 3 and 6 have turned to dribble towards a different cone gate as their yellow partners are tight on their shoulders.

Red Players 4 and 5 have not yet left the safety zone but are looking to turn and make a break into space not covered by their yellow partners.

Play until all the red players have escaped through a cone gate or have had their balls kicked out by their yellow partners. Red players return to the central safety zone and the game is repeated. After three rounds the players swap roles.

Play several rounds and keep a running total of scores - partner v partner or red team v yellow team.

Possible changes

Play that any yellow player can tackle any red player. Red players who have had their ball kicked out can then support others to help get their ball through a cone gate. Play then restarts with however many balls the team has left. How many rounds can the red team survive before all their balls are kicked out?
