

End zone

How it works

The red players dribble around inside the playing area trying to stay in space.

On a signal from the coach the two Yellow and Blue Player 1s at the side enter the playing area and must try to win possession of a ball from one of the red players.

If a Yellow or Blue Player 1 wins possession of a ball they must pass it to their partner in the end zone.

The yellow or blue player in the end zone must control and stop the ball within that zone or the red player can retrieve the ball and rejoin the game.

On the right side of the playing area the Blue Player 1 has tackled for the ball but it has gone out of the playing area at the side. This red player can also retrieve the ball and rejoin the game.

When the coach calls 'End zone change' the yellow and blue players swap roles as shown in the diagram.

The red players who have lost their ball to an end zone must go and stand in the end zone of the colour that won their ball.

The game continues until the yellow and blue players have all the balls in the end zones. Count how many red players are in each end zone to get a winner. Change the yellow and blue teams and then play again to see if a new group can get more red players into the end zone.

Possible changes

Both yellow and blue players could be allowed into the middle but when one of them wins possession of a ball they must still pass it to their partner who has made a run into the end zone.
