

Cone running

How it works

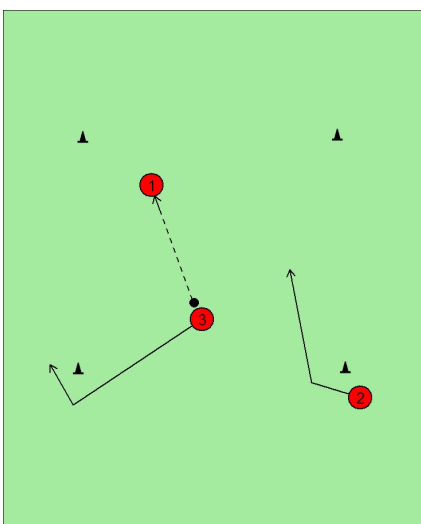

Three players stand in a grid, one with a ball.

Player 1 passes the ball to player 2 and then starts to make a run around a corner cone.

Player 2 passes to Player 3 and then also starts to make a run around a corner cone.

Player 1 continues run around corner cone to get back into the grid.

Player 3 passes to Player 1 and starts to make a run around a corner cone.

Player 2 continues run to get back into the grid for pass from Player 1.

Drill continues with repeated passing and moving sequence.

Challenge to keep passing sequence going with no errors for 30 seconds/1 minute.

Which grid can keep going the longest without an error?

Possible changes

First touch passing only.

Have 2 groups of 3 working separately in the same grid at the same time - this really tests them.
